

LIQUID CRYSTAL DISPLAY AND THIN FILM TRANSISTOR PANEL THEREFOR

ABSTRACT OF THE DISCLOSURE

5 A thin film transistor panel for a liquid crystal display includes a substrate,
a plurality of data lines formed over the substrate and extending in a first
direction, and a plurality of gate lines formed over the substrate and extending in
a second direction. The plurality of gate lines cross the plurality of data lines to
form a plurality of pixel areas, each of the plurality of pixel areas having a
10 multi-bent band shape. Each of a plurality of pixel electrodes are formed in a
corresponding pixel area.
